

In the last few years there has been a sharp increase of injuries in bending presses due to **operator crushing of hands**, which may arise on the descent of the machine crossbar, between photocell and matrix, or between photocells and any other object (part carriage or other).

For this reason Triveneta Impianti has patented a revolutionary device that stops the press in case of collision with the critical area of the photocells: a unique product was created, **suitable for retrofitting and for machine builders.**

TRIVENETA IMPIANTI S.r.l.
